INFORMED CONSENT TO CHIROPRACTIC CARE

You are the decision maker for your health care. Part of our role is to provide you with information to assist you in making informed choices. This process is often referred to as “informed consent” and involves your understanding and agreement regarding the care we recommend, the benefits and risks associated with the care, alternatives, and the potential effect on your health if you choose not to receive the care.

We may conduct some diagnostic or examination procedures if indicated. Any examinations or tests conducted will be carefully performed but may be uncomfortable.

Chiropractic care centrally involves what is known as a chiropractic adjustment. There may be additional supportive procedures or recommendations as well. When providing an adjustment, we use our hands or an instrument to reposition anatomical structures, such as vertebrae.

Potential benefits of an adjustment include restoring normal joint motion, reducing swelling and inflammation in a joint, reducing pain in the joint, and improving neurological functioning and overall well-being.

It is important that you understand, as with all health care approaches, results are not guaranteed, and there is no promise to cure. As with all types of health care interventions, there are some risks to care, including, but not limited to: muscle spasms, aggravating and/or temporary increase in symptoms, lack of improvement of symptoms, fractures (broken rib), disc injuries, strokes, dislocations, strains, and sprains.

With respect to strokes, there is a rare but serious condition known as a cervical arterial dissection that involves an abnormal change in the wall of an artery that may cause the development of a thrombus (clot) with the potential to lead to a stroke. This occurs in 3-4 of every 100,000 people whether they are receiving health care or not. Patients who experience this condition often, but not always, present to their medical doctor or chiropractor with neck pain and headache. Unfortunately a percentage of these patients will experience a stroke. As chiropractic can involve manually and/or mechanically adjusting the cervical spine, it has been reported that chiropractic care may be a risk for developing this type of stroke. The association with stroke is exceedingly rare and is estimated to be related in one in one million to one in two million cervical adjustments.

It is also important that you understand there are treatment options available for your condition other than chiropractic procedures. These options may include, but are not limited to: medical care with prescription drugs, physical therapy and surgery.

Lastly, you have the right to a second opinion and to secure other opinions about your circumstances and health care as you see fit.

I have read, or have had read to me, the above consent. I appreciate that it is not possible to consider every possible complication to care. I have also had an opportunity to ask questions about its content, and by signing below, I agree with the current or future recommendation to receive chiropractic care as is deemed appropriate for my circumstance. I intend this consent to cover the entire course of care from all providers in this office for my present condition and for any future condition(s) for which I seek chiropractic care from this office.
